AI-first Product Manager with 3+ years shipping features for 8M+ users at Morgan Stanley — with the instincts of a founder. Solo-built and shipped a live AI product end-to-end using Claude Code and Google Calendar API. Combines financial services rigor with scrappy startup execution: self-taught automation, zero-budget tooling, and a relentless bias for customer impact. Ready to bring the same builder energy to Razorpay's SME payments ecosystem.

PROJECTS

Max - AI Calendar Assistant (Link)

Sole Product Manager & builder · Streamlit, Claude Code, Google Calendar API, OAuth 2.0 · Live in beta

- **Identified an unaddressed gap in Android calendar UX** through structured user research — before Gemini announced AI-native Calendar integration - pinpointing context-switching between chat/mail and calendar as a high-frequency daily pain point.
- **Shipped a working MVP solo in under 2 weeks** owning every layer end-to-end: product scoping, UX flow, OAuth integration, Calendar API wiring, and NLP intent routing — zero engineering team, zero budget, zero playbook.
- **Iterating live beta:** improving NLP accuracy, tightening edge-case handling, and refining conversation UX based on real user feedback — applying the same test-and-iterate loop central to Razorpay's product culture.

WORK EXPERIENCE

Product Manager, Morgan Stanley

Jan 2025 - Present

Product Manager for Client Onboarding and Demographics fleet for US Wealth Management businesses

- **Unified cross-platform client experience:** Identified fragmented login and enrollment as a top friction point across platforms; led end-to-end delivery of seamless one-click SSO and synchronized T&C acceptance for 8M+ users — applying customer-first prioritization from discovery through go-live.
- Enabled in-app **Fiserv payments** for ETrade clients, eliminating app switching & increasing retention
- Led integration of mortgage records to distributed systems into a **unified single KYC** profile — consolidated fragmented data, improving cross-product onboarding experience and reducing advisor lookup friction.
- **Self-built an AI-powered UAT evidencing tool** using prompt engineering with no engineers, no budget, no approval process. Cut manual evidence capture time significantly and unblocked faster release cycles.
- Defined product metrics with fleet POs and shipped a **90+ metric Client Onboarding KPI dashboard** on Tableau giving business units their first consolidated funnel view and enabled data backed prioritization across the fleet

Business Analyst, Morgan Stanley

Jun 2022 - Dec 2024

Business Analyst in Transaction Reporting Team - owned end-to-end delivery for OTC derivatives reporting.

- Spotted RTB team's manual reporting bottleneck; **scoped and shipped** Alteryx workflow saving 2,000 hrs/year.
- Self-built automation product with no tooling budget; **50% efficiency** gain, won **Spotlight Award**.
- Owned regulatory **product go-live end-to-end**: authored specs, defined acceptance criteria, shipped on time.
- Diagnosed Swaption failure root cause via data analysis; redesigned logic **lifting acceptance to 98%**.

Operations In-charge, Orangepod

Sep 2021 - Apr 2022

Early stage digital marketing startup - Web Development & Instagram Marketing services for local businesses

- **Streamlined product delivery** including onboarding, client engagement and design alignment
- Steered customer service leading to an **87% reduction in customer complaints within 3 months**
- **Assisted the founding team** in delegating tasks & developing a high-impact sales pitch closing 5 clients

SKILLS & TOOLS

- **Building and Shipping:** Product roadmaps, requirements & acceptance criteria, UAT, agile delivery, go-to-market execution, data-driven prioritization, proficient communication and stakeholder alignment across time zones
- **Working with Ambiguity:** Self initiated learning, scrappy automation, problem solving mindset
- **Tools:** Jira, Figma, Balsamiq, GitHub, OAuth 2.0, REST APIs, Claude Code, Cursor AI, Python fundamentals, PowerBI, Advanced Excel, MS Office Suite, Google Workspace

CERTIFICATIONS

- **AI Product Strategy & Build Lab** by Curious PM to build AI apps from concept to deployment
- **Product Discovery** by Product School for user research and customer validation techniques
- **Product Analytics** by Product School for data driven Product metrics analysis
